

AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-16 and 19, 20. (Cancelled)

17. (Currently amended) A pillbox for attachment to a PED, comprising:

a body portion that includes a generally flat wall that lies in a plane, the flat wall having opposed sides, the body portion being attached to the PED by clips that project from the opposing sides;

a door that defines a compartment within which pills can be disposed, the door being movable relative to the body portion to selectively open and close the compartment; and

a connection between the door and the body portion.

18. (Currently amended) The pillbox of claim 17, wherein:

~~the body portion includes a generally flat wall that lies in a plane and clips that project from opposing sides of the wall to engage the PED; and~~

the connection between the door and the body portion is defined by a pair of spaced tracks that are included as part of the wall of the body portion, the door being

movable back and forth along the tracks in a plane generally parallel with the plane in which the wall lies.

21. (New) The pillbox of claim 17, further comprising alarm software that can be included as part of the PED, the alarm software enabling the PED to provide reminders to a user to take medication at prescribed intervals or times.

22. (New) The pillbox of claim 18, wherein the door includes a pair of indents to facilitate the door being grasped by a user.

23. (New) The pillbox of claims 18, wherein the door is generally rounded, and includes a pair of indents to facilitate the door being grasped by a user.

24. (New) The pillbox of claim 18, wherein the door is generally rounded, and has a flat surface that stabilizes the PED when the PED is placed on its back on a flat surface.

25. (New) A pillbox for attachment to a PED, comprising:

a body portion that includes a generally flat wall that lies in a plane, the flat wall having opposed sides, the body portion being attached to the PED by clips that project from the opposing sides;

a generally rounded door that defines a compartment within which pills can be disposed, the door being movable relative to the body portion to selectively open and

close the compartment, the door including a pair of indents to facilitate the door being grasped by a user and a flat surface that stabilizes the PED when the PED is placed on its back on a flat surface; and

a connection between the door and the body portion, the connection between the door and the body portion being defined by a pair of spaced tracks that are included as part of the wall of the body portion, the door being movable back and forth along the tracks in a plane generally parallel with the plane in which the wall lies.

26. (New) The pillbox of claim 25, further comprising alarm software that can be included as part of the PED, the alarm software enabling the PED to provide reminders to a user to take medication at prescribed intervals or times.
